Il modello si articola intorno all'entità principale prodotto (IR_ITEM). Le responsabilità autoriali nella realizzazione del prodotto sono rappresentate nelle due forme ODS_L1_IR_ITEM_CONTRIBUTOR che elenca gli autori e la ODS_L1_IR_ITEM_CON_PERSON che riporta la relazione di responsabilità degli autori riconosciuti sull'anagrafica di ateneo. Le altre viste riportano gli attributi del prodotto suddivisi per "element".

La vista riporta per ciascun ITEM i metadati salienti (dalla classificazione, al titolo, data e sede di edizione). La vista ha per chiave il campo ID ed in generale espone tutti i valori relativi al prodotto che sia de normalizzabili su una singola riga (dai campi ausiliari alle metriche relative al prodotto se presenti).

Il contenuto della vista ODS_L1_IR_ITEM rappresenta l'intera popolazione di ITEM censiti in IR incluse versioni provvisorie e deprecate. Il diagramma sottostante illustra la relazione con le due viste: ODS_L1_IR_ITEM_MASTER e ODS_L1_IR_ITEM_MOST_VALIDATED che possono essere utilizzate per accedere alle versioni "master" o "most-validated" di un ITEM.

La vista ODS_L1_IR_ITEM_MASTER contiene la versione MASTER dell'item, ovvero soddisfa le seguenti:

- esclusi i ritirati [withdrawn=0];
- esclusi quelli in stato bozza/respinti [workflow_validation_status in (0, 1, 3, 4, 5)];
- la cui versione è quella "master" [is_master=1].

Effettuando l'incrocio con le tabelle dei metadati (sull'item_id che si trova in questa vista) si troveranno quindi gli ultimi metadati inseriti in IR

La vista ODS_L1_IR_ITEM_MOST_VALIDATED contiene la versione "più validata" dell'item, ovvero soddisfa le seguenti:

- esclusi i ritirati [withdrawn=0];
- esclusi quelli in stato bozza/respinti [workflow_validation_status in (0, 1, 3, 4, 5)];
- la cui versione è quella "più pubblicata" [is_most_validated=1]. La logica per il recupero della versione più pubblicata era quella presente in BI, ovvero tra più versioni, viene scelta (in ordine di priorità - la prima che trova):

1. versione master in stato pubblicato (wf_validation_status 0 o 1)
2. versione snapshot in stato pubblicato (wf_validation_status 0 o 1)
3. versione più recente in stato workflow step 3 (wf_validation_status 5)
4. versione più recente in stato workflow step 2 (wf_validation_status 4)
5. versione più recente in stato workflow step 1 (wf_validation_status 3)

Effettuando l'incrocio con le tabelle dei metadati (sull'item_id che si trova in questa vista) si troveranno quindi i metadati di IR come venivano visualizzati in BI

La vista riporta i dati relativi al ruolo della persona (RM PERSON) in qualità di autore di un determinato prodotto. La chiave è rappresentata dal campo ID che a sua volta è chiave surrogata della coppia IR_ITEM_ID e RM_PERSON_ID. Le fonti principali sono: ODS_L0_IR_ITEM_CONTRIBUTOR e ODS_L1_RM_PERSON. I dati presenti in questa vista vengono caricati a partire da ODS_L0_IR_ITEM_CONTRIBUTOR con dc.element = "authority" ed in cui il value sia una PERSON di RM (CONTRIBUTOR.AUTHORITY=PERSON.PID)

N.B.

- è necessario il "DISTINCT I.ITEM_ID" siccome vogliamo contare 1 sola volta la pubblicazione con 2 o più autori sullo stesso dipartimento. Se una pubblicazione ha due o più autori su N dipartimenti, verrà contata N volte
- è necessario il "DISTINCT COP.RM_PERSON_ID" per il conteggio dei contributi, in quanto il join su "ODS_L1_RM_PERSON_POSITION_LAST" potrebbe duplicare le righe dei contributi (per autori che hanno più position attive sullo stesso dipartimento, come assegnista e come dottorando ad es.)
