

MATLAB: local installation

This is a quick guide to install MATLAB on your workstation with your own license, provided by your personal MathWorks account.

Step-by-step guide

First of all, you need a MathWorks account with one or more licenses associated to your profile (<https://it.mathworks.com/mwaccount/>)

1. Select the product you want to install, and click on the download button (a down arrow, in the third column from the right side of the list of your software).
2. Take note about the license id (section: **2. Download product files**), and select the right installer for the distribution of your system (Windows, Mac or Linux).
 - a. Please, note that the page of the web_downloads has several helpful links.
3. After the download, move the .zip installer file in your preferred path, and extract all the files.
4. Run the installer; a window will be opened:
 - a. select the "Log in with a MathWorks Account" installation method, then type the "Next >" button;
 - b. accept the terms of the license agreement (bullet point "Yes"), then type the "Next >" button;
 - c. insert the email address and password of your MathWorks Account, then type the "Next >" button;
 - d. select the "Install" action, then type the "Next >" button;
 - e. select the license of the product that you want to install, then type the "Next >" button;
 - f. select the installation folder, then type the "Next >" button;
 - g. select the products to install from the list (don't select the License Manager if you don't need it), then type the "Next >" button;
 - h. insert the full path to the license file, then type the "Next >" button;
 - i. [OPTIONAL] insert the path where you want to create of the symbolic link to MATLAB scripts, then type the "Next >" button;
 - j. type the "Install" button
5. Complete the installation, following the possible message returned by the installer.
