

# GridFTP clients

- [Globus-url-copy client](#)
  - [Globus Web App](#)
- 

[GridFTP](#) is a very efficient protocol for transferring data, it enhances the standard ftp service making it more reliable and faster. It is being developed by the [Globus](#) alliances and is part of an open-source toolkit for HPC application management.

Refer to [globus-url-copy](#) page if you want a command line tool for transfer data using GridFTP protocol, or [Globus Web App](#) (previously name GlobusOnline) page if you prefer a web browser GUI.
